Message from Patty Wright, MD
Safety Officer, VUMC Quality, Safety, and Risk Prevention
See the attached for additional information.

Please note the following important change to outpatient IR orders being placed on patients who are currently inpatients (i.e. an inpatient is determined to need an outpatient IR procedure done after discharge):

Outpatient Consult to Adult Interventional Radiology (CON45) & Outpatient Consult for Adult Image-Guided Procedures (CON11119) orders were allowed to be placed as an inpatient order. These could potentially be discontinued before acted on when the patient is discharged.

When placed as an Outpatient order via the Discharge Navigator the orders will not discontinue and persist until scheduled and completed.

A new required question has been added to the Inpatient version of CON45 and CON11119 that will prevent the orders from being signed as IP. The display caption for the question will say:

“Please go to the Discharge Navigator, "Discharge Orders" section and place this as an "Outpatient" Order. Ordering from the "Orders" Activity as an Inpatient order is not allowed.”
