How to Document a Rapid Response (RRT) in eStar

When an RRT is initiated, the bedside nurse should document the reason for the RRT, interventions the bedside nurse took, and any additional information regarding the patient condition and/or outcome in an Event Note.

1.) Click on Notes
2.) Click on New Note
3.) Choose Rapid Response under Type
4.) Complete documentation within the Note
5.) Sign Note
The RRT ICU nurse will document events from the RRT on the Rapid Response Team Flowsheet. This form is located in Medex and is not patient specific. After completion, scan the form into the patients chart.

***At this time, do NOT use the Code Narrator Rapid Response section to document.
